Emerging Issues In Green Criminology Exploring Power Justice And Harm Critical Criminological Perspectives

Southern Green Criminology This book brings the visual dimension of environmental crimes and harms into the field of green criminology. It shows how photographic images can provide a means for eliciting narratives from people who live in polluted areas – describing in detail and from their point of view what they know, think and feel about the reality in which they find themselves living. Natali makes the argument for developing a visual approach for green criminology, with a single case-study as its central focus, revealing the importance of using photo elicitation to appreciate and enhance the reflexive and
active role of social actors in the symbolic and social construction of their environmental experiences. Examining the multiple interactions between the images and the words used to describe the socio-environmental worlds in which we live, this book is a call to open the eyes of green criminology to wider and richer explorations of environmental harms and crimes. An innovative and engaging study, this text will be of particular interest to scholars of environmental crime and cultural, green and visual criminologies.

Animal Harm The application of criminological perspectives to discussion of the environment is a rapidly developing field at the cutting edge of criminology. This innovative but accessible introduction to the key debates in green criminology both familiarises newcomers to the field with the core theories and methodological precepts and challenges them to take a critical approach. In addition to analysing an extensive range of contemporary issues – environmental harm, food and water security, fracking, climate change and genetically modified crops – the text steps back to examine overarching themes, including the power relationships between states, corporations and the human and non-human components of our environment. In this way, Exploring Green Crime prepares readers to approach environmental criminology with a questioning and analytical mind-set. With useful end of chapter summaries, review questions and further reading, the text is ideal for students of criminology, criminal justice, law, sociology and environmental studies.

Routledge Handbook of Critical Criminology This impressive collection of original essays explores the relationship between social conflict and the environment - a topic that has received little attention within criminology. The chapters provide a systematic and comprehensive introduction and overview of conflict situations stemming from human exploitation of environments, as well as the impact of social conflicts on the wellbeing and health of specific species and ecosystems. Largely informed by green criminology perspectives, the chapters in the book are intended to stimulate new understandings of the relationships between humans and nature through critical evaluation of environmental destruction and degradation.
associated with social conflicts occurring around the world. With a goal of creating a typology of environment-social conflict relationships useful for green criminological research, this study is essential reading for scholars and academics in criminology, as well as those interested in crime, law and justice.

Environmental harm Environmental harms associated with pollution of the air, land, and water kill and injure more people than street crime on an annual and daily basis. Financially, the losses associated with environmental damage are enormous. Environmental Law, Crime, and Justice addresses these issues through providing an introduction to the study of environmental issues pertinent to the study of environmental crime, contemporary environmental law, environmental policy, and environmental justice. This book blends together areas that are often treated or studied individually or in isolation from one another. Designed for classroom use, Environmental Law, Crime, and Justice exposes readers to the variety of issues involved in the study of environmental law, crime and justice; illustrates the serious nature of these problems; and demonstrates how readers can and should become involved in studying environmental crime, law, and crime."--BOOK JACKET.

Fighting Environmental Crime in Europe and Beyond Southern Green Criminology focuses on the threat the western world poses to the rest of the globe, and how Western imposed ideas of progress are damaging the planet, especially the southern hemisphere.

Green Criminology Environmental crime is arguably the most vital and destructive crime of the 21st century, especially in the light of climate change and shifts in social, economic and ecological circumstances that will accompany global warming. This two volume set explores the nature and dynamics of environmental crime and investigates a variety of topics including illegal fishing, poaching, wildlife crimes, animal abuse, climate change and ecocide as well as crimes related to waste, energy and contamination. Together with an original introduction by the editor, this collection provides researchers and students alike with a comprehensive overview of crimes pertaining to the environment.
Routledge International Handbook of Green Criminology This unique study of social harm offers a systematic and critical discussion of the nature of environmental harm from an eco-justice perspective, challenging conventional criminological definitions of environmental harm. The book evaluates three interconnected justice-related approaches to environmental harm: environmental justice (humans), ecological justice (the environment) and species justice (non-human animals). It provides a critical assessment of environmental harm by interrogating key concepts and exploring how activists and social movements engage in the pursuit of justice. It concludes by describing the tensions between the different approaches and the importance of developing an eco-justice framework that to some extent can reconcile these differences. Using empirical evidence built on theoretical foundations with examples and illustrations from many national contexts, ‘Environmental harm’ will be of interest to students and academics in criminology, sociology, law, geography, environmental studies, philosophy and social policy all over the world.

Green Harms and Crimes A comprehensive collection of the essential writings on race and crime, this important Reader spans more than a century and clearly demonstrates the long-standing difficulties minorities have faced with the justice system. The editors skillfully draw on the classic work of such thinkers as W.E.B. DuBois and Gunnar Myrdal as well as the contemporary work of scholars such as Angela Davis, Joan Petersilia, John Hagen and Robert Sampson. This anthology also covers all of the major topics and issues from policing, courts, drugs and urban violence to inequality, racial profiling and capital punishment. This is required reading for courses in criminology and criminal justice, legal studies, sociology, social work and race.

Green Criminology This groundbreaking text provides students with an overview and assessment of green criminology as well as a call to action. Green Criminology draws attention to the ways in which the political-economic organization of capitalism causes ecological destruction and disorganization. Focusing on real-world issues of green crime and environmental justice, chapters examine ecological
withdrawals, ecological additions, toxic towns, wildlife poaching and trafficking, environmental laws, and
nongovernmental environmental organizations. The book also presents an unintimidating introduction to
research from the physical sciences on issues such as climate change, pollution levels, and the
ecological footprint of humans, providing a truly interdisciplinary foundation for green criminological
analysis. To help students succeed in the course—and to encourage them to see themselves as future
green criminology researchers—the end-of-chapter study guides include: • Questions and Activities for
Students that review topics students should be able to conceptualize and address. • Lessons for
Researchers that suggest additional areas of research in the study of green crime.

Crimes Against Nature Building on knowledge within the fields of green and eco-global criminology, this
book uses empirical and theoretical arguments to discuss the multi-dimensional character of eco-global
crime. It provides an overview of eco-global crimes and discusses them from a justice perspective. The
persistence of animal abuse and speciesism are also examined together with policies aimed at controlling
the natural world and plant species. Pollution by large corporations, rights of indigenous peoples and the
damage caused by the mineral extraction are also considered. Providing new ideas and insights which
will be relevant on a global scale, this book is an interesting and useful study of the exploitation of nature
and other species. It will be invaluable for students and scholars globally, working within or connected to
the field of green and eco-global criminology. The book will also be important for the participants of
various social movements, especially the environmental and animal advocacy movements.

Environmental Crime and its Victims Adopting a multi-disciplinary and comparative approach, this book
focuses on the emerging and innovative aspects of attempts to target the accumulated assets of those
engaged in criminal and terrorist activity, organized crime and corruption. With contributions from
leading international academics and practitioners in the fields of law, economics, financial management,
criminology, sociology and political science, the book explores law and practice in countries with
significant problems and experiences, revealing new insights into these dilemmas. It also discusses the
impact of the ‘follow-the-money’ approach on human rights while also assessing effectiveness.

A Visual Approach for Green Criminology Crimes Against Nature provides a systematic account and analysis of the key concerns of green criminology, written by one of the leading authorities in the field. The book draws upon the disciplines of environmental studies, environmental sociology and environmental management as well as criminology and socio-legal studies, and draws upon a wide range of examples of crimes against the environment – ranging from toxic waste, logging, wildlife smuggling, bio-piracy, the use and transport of ozone depleting substances through to illegal logging and fishing, water pollution and animal abuse. The book is divided into three parts: Part 1 sets out theoretical approaches and perspectives on the subject; Part 2 explores the (national and international) dimensions of environmental crime and the explanations for it; Part 3 deals with the range of responses to environmental crime - environmental law enforcement, regulation, environmental crime prevention and the role of global institutions and movements.

Green Cultural Criminology This book provides a comprehensive introduction to and overview of eco-global criminology. Eco-global criminology refers to a criminological approach that is informed by ecological considerations and by a critical analysis that is global in scale and perspective. Based upon eco-justice conceptions of harm, it focuses on transgressions against environments, non-human species and humans. At the centre of eco-global criminology is analysis of transnational environmental crime. This includes crimes related to pollution (of air, water and land) and crimes against wildlife (including illegal trade in ivory as well as live animals). It also includes those harms that pose threats to the environment more generally (such as global warming). In addressing these issues, the book deals with topics such as the conceptualization of environmental crime or harm, the researching of transnational environmental harm, climate change and social conflict, threats to biodiversity, toxic waste and the transference of harm, prosecution and sentencing of environmental crimes, and environmental victimization and transnational activism. This book argues that analysis of transnational environmental
crime needs to incorporate different notions of harm, and that the overarching perspective of eco-global criminology provides the framework for this. Transnational Environmental Crime will be an essential resource for students, academics, policy-makers, environmental managers, police, magistrates and others with a general interest in environmental issues.

An Introduction to Green Criminology and Environmental Justice Over the last two decades, "green criminology" has emerged as a unique area of study, bringing together criminologists and sociologists from a wide range of research backgrounds and varying theoretical orientations. It spans the micro to the macro—from individual-level environmental crimes and victimization to business/corporate violations and state transgressions. There have been few attempts, however, to explicitly or implicitly integrate cultural criminology into green criminology (or vice versa). This book moves towards articulating a green cultural criminological perspective. Brisman and South examine existing overlapping research and offer a platform to support future excursions by green criminologists into cultural criminology’s concern with media images and representations, consumerism and consumption, and resistance. At the same time, they offer an invitation to cultural criminologists to adopt a green view of the consumption landscape and the growth (and depictions) of environmental harms. Green Cultural Criminology is aimed at students, academics, criminologists, and sociologists with an interest in green criminology and cultural criminology: two of the most exciting new areas in criminology today.

Environmental Law, Crime, and Justice Academic and general interest in environmental crimes, harms, and threats, as well as in environmental legislation and regulation, has grown sharply in recent years. The Routledge International Handbook of Green Criminology is the most in-depth and comprehensive volume on these issues to date. With contributions from leading international green criminologists and scholars in related fields, the Handbook examines a wide range of substantive issues, including: climate change corporate criminality and impacts on the environment environmental justice media representations pollution (e.g. air, water) questions of responsibility and risk wildlife trafficking The chapters explore
green criminology in depth, its theory, history and development, as well as methodological concerns for this area of academic interest. With examples of environmental crimes, harms, and threats from Africa, Asia, Australia, Eastern Europe, South America, the United Kingdom, and the United States, this book will serve as a vital resource for international scholars and students in criminology, sociology, law and socio-legal studies, as well as environmental science, environmental studies, politics and international relations.

Routledge International Handbook of Green Criminology Drawing on the work of Allan Schnaiberg, this book returns political economy to green criminology and examines how the expansion of capitalism shapes environmental law, crime and justice. The book is organized around crimes of ecological withdrawals and ecological additions. The Treadmill of Crime is written by acclaimed experts on the subject of green criminology and examines issues such as the crime in the energy sector as well as the release of toxic waste into the environment and its impact on ecosystems. This book also sets a new research agenda by highlighting problems of ecological disorganization for animal abuse and social disorganization. This book will be of interest to students, researchers and academics in the fields of criminology, political science, environmental sociology, and natural resources.

Comparative Criminal Justice The Routledge International Handbook of Green Criminology was the first comprehensive and international anthology dedicated to green criminology. It presented green criminology to an international audience, described the state of the field, offered a description of a range of environmental issues of regional and global importance, and argued for continued criminological attention to environmental crimes and harms, setting an agenda for further study. In the six years since its publication, the field has continued to grow and thrive. This revised and expanded second edition of the Handbook reflects new methodological orientations, new locations of study such as Asia, Canada and South America, and new responses to environmental harms. While a number of the original chapters have been revised, the second edition offers a range of fresh chapters covering new and emerging areas of
study, such as: conservation criminology, eco-feminism, environmental victimology, fracking, migration and eco-rights, and e-waste. This handbook continues to define and capture the field of green criminology and is essential reading for students and researchers engaged in green crime and environmental harm.

Criminology Southern Green Criminology focuses on the threat the western world poses to the rest of the globe, and how Western imposed ideas of progress are damaging the planet, especially the southern hemisphere.

Issues in Green Criminology Issues in Green Criminology: confronting harms against environments, humanity and other animals aims to provide, if not a manifesto, then at least a significant resource for thinking about green criminology, a rapidly developing field. It offers a set of specially written introductions and a variety of current and new directions, wide-ranging in scope and international in terms of coverage and contributors. It provides focused discussions of current and cutting edge issues that will influence the emergence of a coherent perspective on green issues. The contributors are drawn from the leading thinkers in the field. The twelve chapters of the book explore the myriad ways in which governments, transnational corporations, military apparatuses and ordinary people going about their everyday lives routinely harm environments, other animals and humanity. The book will be essential reading not only for students taking courses in colleges and universities but also for activists in the environmental and animal rights movements. Its concern is with an ever-expanding agenda?the whys, the hows and the whens of the generation and control of the many aspects of harm to environments, ecological systems and all species of animals, including humans. These harms include, but are not limited to, exploitation, modes of discrimination and disempowerment, degradation, abuse, exclusion, pain, injury, loss and suffering. Straddling and intersecting these many forms of harm are key concepts for a green criminology such as gender inequalities, racism, dominionism and speciesism, classism, the north/south divide, the accountability of science, and the ethics of global capitalist expansion. Green
criminology has the potential to provide not only a different way of examining and making sense of various forms of crime and control responses (some well known, others less so) but can also make explicable much wider connections that are not generally well understood. As all societies face up to the need to confront harms against environments, other animals and humanity, criminology will have a major role to play. This book will be an essential part of this process.

Geometries of Crime Building on the success of the second edition, Criminology: A Sociological Introduction offers a comprehensive overview of the study of criminology, from early theoretical perspectives to pressing contemporary issues such as the globalization of crime, crimes against the environment and state crime. Authored by an internationally renowned and experienced group of authors in the Sociology department at Essex University, this is a truly international criminology text that delves into areas that other texts may only reference. This new edition will have increased coverage of psychosocial theory, as well as more consideration of the social, political and economic contexts of crime in the post-financial-crisis world. Focusing on emerging areas in global criminology, such as green crime, state crime and cyber crime, this book is essential reading for criminology students looking to expand their understanding of crime and the world in which they live.

Environmental Crime This important new text introduces conservation criminology as the interdisciplinary study of environmental exploitation and risks at the intersection of human and natural systems. Taking an interdisciplinary approach, the book enhances understanding of the various human and organizational behaviors that pose risks to the environment, humans, and drive conservation crime. As human population growth, global market economies, climate change, deforestation, and illegal exploitation of natural resources continue to increase, academic research from numerous disciplines is needed to address these challenges. Conservation Criminology promotes thinking about how unsustainable natural resources exploitation is a cause and a consequence of social conflict. Case studies profiled in the book demonstrate this cause and effect type situation, as well as innovative
approaches for reducing risks to people and the environment. This text encourages readers to consider how humans behave in response to environmental risks and the various mechanisms that constitute effective and ineffective approaches to enforcement of wildlife crimes, including environmental and conservation policy. Case studies from the USA, Latin America, Africa, and Asia highlight corruption in conservation, global trade in electronic waste, illegal fishing, illegal logging, human-wildlife conflict, technology and space, water insecurity, wildlife disease, and wildlife poaching. Taken together, chapters expand the reader’s perspective and employ tools to understand and address environmental crimes and risks, and to provide novel empirical evidence for positive change. With established contributors providing interdisciplinary and global perspectives, this book establishes a foundation for the emerging field of conservation criminology.

Environmental Crime and Social Conflict This handbook engages key debates in Australian and New Zealand criminology over the last 50 years. In six sections, containing 56 original chapters, leading researchers and practitioners investigate topics such as the history of criminology; crime and justice data; law reform; gangs; youth crime; violent, white collar and rural crime; cybercrime; terrorism; sentencing; Indigenous courts; child witnesses and children of prisoners; police complaints processes; gun laws; alcohol policies; and criminal profiling. Key sections highlight criminological theory and, crucially, Indigenous issues and perspectives on criminal justice. Contributors examine the implications of past and current trends in official data collection, crime policy, and academic investigation to build up an understanding of under-researched and emerging problem areas for future research. An authoritative and comprehensive text, this handbook constitutes a long-awaited and necessary resource for dedicated academics, public policy analysts, and university students.

Southern Green Criminology A comprehensive introduction to green criminology, this book is a discussion of the relationship between mainstream criminal justice and green crimes. Focused on environmental harm within the context of criminal justice this book takes a global perspective and
Introduces students to different theoretical perspectives in green criminology. Looks at the victims of environmental crime throughout. Covers topics such as: wildlife crimes, animal abuse, the causes of environmental crime, regulation, exploitation, environmental activism, policing, prosecution and monitoring. Designed to help readers develop a thorough understanding of the principles of environmental justice and green criminology, as well as contemporary developments, this book will be excellent support to students of green criminology and environmental crime.

Emerging Issues in Green Criminology This book brings together the findings of a multi-disciplinary and international research project on environmental crime in Europe, funded by the European Union (EU). “European Union Action to Fight Environmental Crime” (EFFACE) was a 40-month research project that included eleven European research institutions and think tanks and was led by Ecologic Institute Berlin. EFFACE assessed the impacts of environmental crime as well as effective and feasible policy options for combating it from a multidisciplinary perspective, with a focus on the EU. As part of this project, numerous instances of environmental crime within and outside of the EU were studied and are now presented in this volume. This edited collection is highly innovative in showing not only the many facets of environmental crime, but also how it should be conceptualised and the consequences. An original and rigorous study, this book will be of particular interest to policy makers and scholars of green criminology and environmental studies.

Race, Crime, and Justice This edited collection brings together internationally renowned scholars to explore green criminology through the interdisciplinary lenses of power, harm and justice. The chapters provide innovative case study analyses from around the world that seek to advance theoretical, policy and practice discourses about environmental harm.

Uniting Green Criminology and Earth Jurisprudence Few criminologists have drawn attention to the fact that widespread and significant forms of harm such as green or environmental crimes are neglected by
criminology. Others have suggested that green crimes present the most important challenge to criminology as a discipline. This book argues that criminology needs to take green harms more seriously and to be revolutionized so that it forms part of the solution to the large environmental problems currently faced across the world. It asks how criminology should be redesigned to consider green/environmental harm as a key area of study in an era where destruction of the earth and the world’s ecosystem is a major concern and examines why this has remained unaccomplished so far. The chapters in this book apply an environmental frame of reference underlying a green approach to issues which can be addressed from within criminology and which can encourage criminologists and environmentalists to respond and react differently to environmental crime.

Exploring Green Criminology “This book provides an overview and assessment of green criminology. Based on a political-economic analysis, Green Criminology draws attention to the ways in which the political-economic organization of capitalism causes ecological destruction and disorganization. Focusing on real-world impact, chapters include political-economic examinations of ecological withdrawals, ecological additions, toxic towns, wildlife poaching and trafficking, environmental justice, environmental laws, and nongovernment environmental organizations. The book also explores how ecological footprint, planetary boundary analysis, and other scientific research applies to green criminological analysis”--Provided by publisher.

Conservation Criminology After defining environmental crime and discussing the extent of the environmental crisis, this book explores the causes, investigation, prosecution and prevention of all types of environmental crime.

Emerging Issues in Green Criminology This book explores how young people perceive the severity of crime and delinquency. It particularly addresses whom or what they consider to be the victims of crime and delinquency, how they analyze and assess appropriate responses by the criminal justice system, as
well as their place within it. The book proposes tools for developing a more elaborate and robust understanding of what constitutes crime, identifying those affected by it, and what is deemed adequate or appropriate punishment. In so doing, it offers thick description of young peoples' conceptions of and experiences with crime, delinquency, justice and law, and uses this description to interrogate the role of the state in influencing - indeed, shaping - these perceptions.

Eco-global Crimes In the past three decades, a stream of criminological inquiry has emerged which explores, measures, and theorizes crimes and harms to the environment at the micro-, mezzo-, and macro-levels. This “green criminology”, as it has come to be known, has widened the criminological gaze to consider crimes and harms committed against air, land (from forests to wetlands), nonhuman animals, and water in local, regional, national, and international areas or arenas. Accordingly, green criminology has endeavored to understand the causes and consequences of air and water pollution, biodiversity loss, climate change, corporate environmental crime (e.g., illegal waste disposal), food production and distribution, resource extraction and exploitation, and wildlife trade and trafficking, while also exploring potential responses to these issues. This book seeks to introduce the green criminological perspective to a broader social science audience. Recognizing that green criminology is not the first social science to explore the phenomena and harms at the intersections of humanity and ecology, this book offers an introduction to some of the unique insights developed over nearly 30 years of green criminological thought and scholarship to students, professors, researchers, and practitioners working in the fields of anthropology, economics, environmental humanities, environmental sociology, geography, history, and political ecology. This book contains contributions from researchers in green criminology from around the world, including early- and mid-career scholars, as well as more established voices in the field— all of whom are dedicated to exposing, understanding, and ultimately hoping to thwart further environmental degradation and despoliation.

Dirty Assets Why do people harm, injure, torture and kill animals? This book evaluates the reasons why
these crimes are committed and outlines the characteristics of the animal offender. It considers ethical and value judgements made about animals and the tacit acknowledgement and justification of unacceptable criminal behaviour towards the harming of animals made by offenders. Situating animal abuse, wildlife crime, illegal wildlife trading and other unlawful activities directed at animals firmly within Green Criminology, the book contends that this is a distinct, multi-dimensional type of criminality which persists despite the introduction of relevant legislation. Taking a broad approach, the book considers the killing and harming of animals in an international context and examines the effectiveness of current legislation, policy and sentencing. Including a section on further reading and useful organizations, this book is a valuable exploration into perspectives on the responsibility owed by man to animals as part of broader ecological and legal concerns. It will interest criminologists, ecologists, animal protectionists and those interested in law and society and law and the environment.

Green Criminology This book offers a post-structuralist critique of the problems associated with modernist accounts of environmental harm and regulation. Through a notably detailed micro-political analysis of forest conflict, the author explores the limits of academic commentary on environmental issues and suggests that the traditional variables of political economy, race and gender need to be recast in light of four key modalities through which ‘the environment’ and ‘environmental damage’ are (re)produced. Focusing on vision, speed, lexicon and affect, the book engages a new ethic for categorizing and regulating ‘nature’ and challenges criminologists, sociologists, cultural theorists and others to reconsider what it is possible to say and do about environmental problems.

Deleuze and Environmental Damage Contemporary Issues in Victimology: Identifying Patterns and Trends examines current topics in victimology and explores the main issues surrounding them. Key topics include: intimate partner violence and dating violence, rape and sexual assault on the college campus, Internet victimization, elder abuse, victimization of inmates, repeat and poly-victimization, fear of crime and perceived risk of crime, human trafficking, mass shootings, and child-to-parent violence. Each
chapter includes information about the specific topic, including the nature of the issues, trends, current research, policy, current issues, and future challenges.

Green Criminology This book offers an accessible introduction to comparative criminal justice and examines and reflects on the ways different countries and jurisdictions deal with the main stages in the criminal justice process, from policing to sentencing. This popular bestseller has been fully updated and expanded for the third edition. This textbook provides the reader with: a comparative perspective on criminal justice and its main components; a knowledge of methodology for comparative research and analysis; an understanding of the emerging concepts in comparative criminal justice, such as security, surveillance, retribution and rehabilitation; a discussion of global trends such as the global drop in crime, the punitive turn, penal populism, privatization, international policing and international criminal tribunals. The new edition has been fully updated to keep abreast with this growing field of study and research, including increased coverage of the challenge of globalization and its role and influence on criminal justice systems around the world. Topics such as state crime, genocide and the international criminal court have also grown in prominence since the publication of the last edition and are given increased coverage. This book will be perfect reading for advanced undergraduates and postgraduates taking courses in comparative criminal justice and those who are engaged in the study of global responses to crime. New features such as lists of further reading, study questions and boxed case studies help bring comparative criminal justice alive for students and instructors alike.

Environmental Crime As planet Earth continues to absorb unprecedented levels of anthropogenically induced environmental and climatic change, two similar academic schools of thought have emerged in recent years, both making sustained efforts to explain how and why this state of affairs has evolved. These two disciplines are known as green criminology and earth jurisprudence. Whilst these areas of study can be seen as sub-disciplines of their parent subjects, law and criminology, this book proposes that much can be achieved by authors uniting and collaborating on their academic work. By doing this, it
is argued that green criminology stands to benefit from a discipline that places mother nature at the heart of lawmaking and therefore providing a solution to the environmental harms identified by green criminologists. Furthermore, earth jurisprudence will profit from utilising the breadth of academic work produced within the green criminology academic arena. Therefore, this book seeks to unite green criminology and earth jurisprudence in an effort to find solutions to the extraordinary environmental problems that the world now faces.

Transnational Environmental Crime Over the past ten years, the study of environmental harm and ‘crimes against nature’ has become an increasingly popular area of research amongst criminologists. This book represents the first international, comprehensive and introductory text for green criminology, offering a concise exposition of theory and concepts and providing extensive geographical coverage, diversity and depth to the many issues pertaining to environmental harm and crime. Divided into three sections, the book draws on a range of international case studies and examples, and looks at the conceptual and methodological foundations of green criminology, before examining in detail areas of environmental crime and harm, and how they are addressed, including: climate change and social conflict; abuse and harm to animals; threats to bio-diversity; pollution and toxic waste; environmental victims; environmental regulation, law enforcement and courts; environmental forensic studies; environmental crime prevention. Green Criminology is packed with pedagogical features, including dialogue boxes, case examples, discussion questions and lists of further reading and is perfect for students around the world engaged with green criminology and crime against the environment.

Contemporary Issues in Victimology The book presents discussions of the application of Stan Cohen's theories alongside empirical contributions in the fields of critical and green criminology. Taken together, the authors critically address harms and crimes against the environment, as well as against human and nonhuman victims.
The Palgrave Handbook of Australian and New Zealand Criminology, Crime and Justice The main objective of the second edition of the Routledge Handbook of Critical Criminology is twofold: (1) to provide original chapters that cover contemporary critical criminological theoretical offerings generated over the past five years and (2) to provide chapters on important new substantive topics that are currently being studied and theorized by progressive criminologists. Special attention is devoted to new theoretical directions in the field, such as southern criminology, queer criminology, and green criminology. The diverse chapters cover not only cutting-edge theories, but also the variety of research methods used by leading scholars in the field and the rich data generated by their rigorous empirical work. In addition, some of the chapters suggest innovative and realistic short- and long-term policy proposals that are typically ignored by mainstream criminology. These progressive strategies address some of the most pressing social problems facing contemporary society today, which generate much pain and suffering for socially and economically disenfranchised people. The new edition of the Handbook is a major work in redefining areas within the context of international multidisciplinary critical research, and in highlighting emerging areas, such as human trafficking, Internet pornography and image-based sexual abuse. It is specifically designed to be a comprehensive resource for undergraduate and postgraduate students, researchers and policymakers.

Exploring Green Crime This edited collection brings together internationally renowned scholars to explore green criminology through the interdisciplinary lenses of power, harm and justice. The chapters provide innovative case study analyses from around the world that seek to advance theoretical, policy and practice discourses about environmental harm.

The Treadmill of Crime Environmental crime is one of the most profitable and fastest growing areas of international criminal activity. These types of crime, however, do not always produce an immediate consequence, and the harm may be diffused. As such, the complexity of victimization - in terms of time, space, impact, and who or what is victimized - is one of the reasons why governments and the
enforcement community have trouble in finding suitable and effective responses. This book provides a diverse and provocative array of arguments, critiques and recommendations from leading researchers and scholars in the field of green criminology. The chapters are divided into three main sections: the first part deals with specific characteristics of some of the major types of environmental crime and its perpetrators; the second focuses explicitly on the problem of victimization in cases of environmental crime; and the third addresses the question of how to tackle this problem. Discussing these topics from the point of view of green criminological theory, sociology, law enforcement, community wellbeing, environmental activism and victimology, this book will be of great interest to all those concerned about crime and the environment.
